

Hergom E-30 L Large EcoDesign Wood Burner Stove

<https://www.calonyradref.co.uk/hergom-e30-l-large-ecodesign-efficient-wood-stove>

The E-30 L is the largest model in the E-30 range, and with an impressive 52cm wide glass front it gives a fantastic view of the fire. Featuring top of the range combustion technology, this stove produces a heat output of 11kW to provide a warming, cosy ambience, even to large and otherwise chilly rooms. The large loading potential for the E-30 L means that it will burn those awkwardly shaped logs, up to a length of 600mm, as well as offering the potential to load large quantities of wood to burn for long periods of time, without the need to reload it.

This stove is now EcoDesign ready, and adheres to all of the current specifications for the new Clear Air legislation coming into effect in 2022.

The robust, cast iron construction, associated with Hergom, provides a gentle warmth that continues to emit heat after the fire has gone out. The internal panels of the combustion chamber are also made from cast iron, coated in white flux, offering a versatile, reflective surface to maximise the amount of heat projected out into the room.

The E-30 L also includes a closed combustion adaptor as standard; this enables external air to be fed directly into the combustion chamber.
