

Chilli Penguin "Hungry Penguin" 'Tall-Order' Multifuel Oven Stove

<https://www.calonyradref.co.uk/chilli-penguin-hungry-penguin-tall-order-oven-stove>

This stove has all the features of the Hungry Penguin but has taller oven box, ideal for bakers and bread makers, lover of sticky cakes and savoury bakes. This stove does it all, it keeps you warm, cooks your dinner and boils your kettle for a coffee afterwards. It allows you to make the most of the fuel that you're using to heat your room, it feels like you are cooking for free!

It can also be really appealing for canal boats, studios and homes where you don't want to be dependant on mains gas and electricity, or if you just like the back up of being warm and fed in a power cut

The tall order stoves grew out of a customer suggestion, it all began with a phone call, "this might be a tall order but can you make me a stove with a taller oven? I want to bake bread in it". We now make a tall order version of each of our 5 kW cooker stoves, the Hungry Penguin, the Fat penguin and the High and Mighty penguin.

Cooking on a penguin

All of our cooker models have an oven box and top plate (oven top surface). The Hungry Penguin (tall order) comes out with a stainless steel oven bottom trivet, to put cooking dishes on and a removable oven shelf. The oven temperature can reach up to 300°C, but it will tick

over comfortably between 140-180°C. You can fit a small saucepan and kettle on the top plate.

If you regularly use the top surface of the stove, there is an optional stainless steel top plate available, which sits on top of the stove. We offer two types of these. The top flue version has a “U” shaped cut out to sit around the flue. The rear flue version has no cut out. (If you want the rear flue version let us know at point of order, so we can remove the stove collar for you. Also ask your stockist for a “rear flue ready stove”).

There is a small vent hole at the rear of the oven box to allow cooking smells to escape up the flue. If you want any cooking inspiration look at our recipe page.

Ecodesign stoves. In order to be an Ecodesign stove, a stove must be independently verified to meet stringent emission requirements. Particulates or PMs are the most commonly recognised of these measures. These and others are listed in the tech details table below.
