

Höfats SPIN 90 / SPIN 120 Suspended Bioethanol Burner

<https://www.calonyradref.co.uk/vortex-tornado-flame-suspended-hanging-bioethanol-burner>

A truly stunning visual to enhance any atmosphere - from indoor to outdoor use, these visually stunning pieces of engineering brilliance are a real eye-catcher.

Why buy a Höfats SPIN suspended bioethanol burner?

- Suspension-height is easily adjustable
- Long burning time (60-80mins)
- Unique tornado style flame pattern
- Suitable for outdoor and indoor use (certified by a laboratory in accordance with DIN EN 16647)

Choose your Size - 90 vs 120

In terms of style and performance, both options work in the same way and produce the same

stunning effect - but of course, the impact of the larger 120 model is greater due to its scale.

Both options offer a truly stunning visual and bring the warmth of natural flame into the room - or indeed the outdoors!

With the greater fuel capacity of the 120, you can expect burn times of around 80 minutes, while the 90 achieves closer to 60 minutes - both excellent run times for the amount of fuel used, and for the lively display offered by both models.

The secret behind the flame tornado

How is the signature flame vortex created? When the bioethanol gel fuel is ignited and the glass cylinder made of heat-resistant borosilicate is placed on top, the inflowing air is set in rotation via three baffles. This movement is passed on to the flame, and the glass's own thermals and chimney effect additionally propel the fire vortex, which is securely enclosed. As a result, the flame grows by more than 500 percent in height and extends over the entire length of the glass cylinder - without any additional energy at all!
