

Dik Geurts Oval Front Suspended Hanging Wood Stove

<https://www.calonyradref.co.uk/dik-geurts-oval-front-suspended-hanging-wood-stove>

The Oval Front suspended wood stove is truly a piece of beautiful engineering. Its unique oval shape gives you a great view of the large flame picture, and the suspended setup means no structural support underneath - which is a difficult impression to beat!

The air slider has three different settings to easily control the intensity of the fire; and being a Dik Geurts, it goes without saying the responsiveness of the air controlled is second to none.

The dark anthracite vermiculite interior ensures optimal and clean combustion, and for those who do not want an air vent in the room, an optional external air feed kit is available, meaning the stove can still pull additional air from outside, without having to have an open vent in the room with potential to cause a draught. There is also an option available for new air-tight passive houses, whereby the stove is sealed and will only be able to pull air from outside - this option is logical only for sealed passive houses. For external air options please get in touch!

Please note - we include the suspension kit in our online price - purchasing the stove without this included means the stove cannot be mounted so we include it as standard.
