Woodland LCD Electric Fire – Realistic Flames, Modern Convenience

Inspired by the award-winning Woodland woodburning stove, the Woodland LCD Electric Fire delivers the charm of a traditional stove with the simplicity of modern electric technology. With its LCD flame display and no projected background, it creates a stunningly realistic fireside ambience without limiting the styling or wall space of your room.

Why Choose the LCD Model?

- # Ultra-Realistic Flames – The LCD screen creates lifelike flames and a glowing ember bed for the authentic warmth and visual appeal of a woodburner.
- # Enhanced Depth & Detail – Side mirror reflections and flickering effects make the flames appear natural and immersive.
- # Customisable Ambience – Multiple flame and bed colour options, adjustable flame speed, variable downlight, and realistic crackle sound let you tailor the experience to your mood.

Powerful & Efficient Heating

With up to 2.0kW heat output, the Woodland LCD Electric Fire keeps your space comfortable while giving you full control via remote or the Ilekto app, including timers and minimum temperature settings.

Easy Installation & Timeless Design

Plug into a standard UK socket for instant warmth. Crafted from steel with an authentic cast iron door, the Woodland LCD retains the style and durability of a traditional stove. Available in Black or Silver handles, and optionally as a Logstore model for extra practicality.

Experience the perfect fusion of tradition, style, and modern technology with the Woodland LCD Electric Fire – realistic flames, total flexibility, and effortless convenience.
