Winner of the “**Electric Appliance of the Year**” award at the *Hearth & Home Exhibition 2019*.

Manufactured from high quality yet lightweight steel and finished in a matt black powder-coat finish for durability, the E-Trinity3 Electric stove has the option of **1 or 2Kw heat output** along with the option to have just the flame effect only, making it the perfect choice for enjoying the ambience of a real fire without any heat for warmer evenings.

The E-Trinity3 is a contemporary styled electric stove with the distinctive feature of two side window panels allowing the flame effect to be viewed from the sides as well as the front of the stove. Being one of only a few electric stoves on the market which feature flames at the front, middle and back of the firebed gives this a very realistic flame effect.

An optional **decorative flue pipe kit** and a choice of **black glass hearths** are available to complete the look.

The incredibly realistic **3D holographic flame projection** has 4 flame settings – high flame, medium flame, low flame and glowing embers. Our flame projection technology creates flames in the front, middle and back of the firebed gives greater ambience and realism and the flame effect colour can be altered – when operated via the app, the choice of colours in almost

limitless. The crystal embers and ceramic logs provide a natural, realistic look to the stove.

The stove can be controlled from the unit itself or from the 7 day programmable intelligent remote which is supplied as standard or via the ACR Stoves app. The stove can be programmed to come on automatically at different times of the day and the week and can be thermostatically controlled or just used as a basic remote control.
