

ACR Balanced Flue Chimney Retrofit Kit for Gas Stoves

<https://www.calonyradref.co.uk/acr-gas-balanced-flue-retrofit-chimney-renovation-kit>

ACR's 'Renovation System' flue kit is designed to allow you to retrofit a balanced flue gas stove to an existing masonry chimney with a flex liner.

Designed to work with the ACR range of Natural Gas and LPG stoves, this balanced flue kit effectively adapts a conventional flue setup using a flex liner in a masonry chimney, to allow the free space of the chimney to facilitate inbound air required to achieve a balanced flue system.

The kit is available with stainless steel flue pipe (standard) as well as a coated black finish, and comprises the spigot adaptor for the stove top flue exit, the necessary starter length of flue pipe, a vertical terminal/cowl, and suitable cannon chimney pot adaptor.

Note: a gas chimney liner is required to complete this setup, but is not included as each chimney will require different lengths of liner. If an existing suitable liner is not already fitted, this will need to be measured and ordered separately for installation with this kit.
